BEAUCARNEA

PRESS KIT 2027

A memory of temperatures, in the service of fine wines.

A mechanical capsule that makes each bottle's transport and storage conditions visible.

GRAND PRIZE FOR INNOVATION 2025

La Revue du vin de France

01 / OUR PURPOSE

Protecting an estate's reputation, from the estate to the tasting.

You devote your expertise to crafting every cuvée. Once a bottle leaves the estate, transport and storage conditions can alter its expression. Yet, when the wine is tasted, it is the estate alone that is judged.

Beaucarnea makes these conditions visible. Integrated and sealed at the estate during bottling, the capsule retains a record of the minimum and maximum temperatures experienced by each bottle.

INFORMATION READABLE AT A GLANCE

For the estate: making conditions experienced after bottling visible. For the buyer: providing additional information before purchase or tasting.

02 / HOW IT WORKS

Mechanical precision in the service of wine.

01

Record

The indicators retain the minimum and maximum temperatures experienced by the bottle.

02

Read the temperature

The dial also displays the current temperature in degrees Celsius and Fahrenheit.

03

Identify

A number identifies the estate. The dial colour indicates the vintage.

No battery, no app, no dedicated reader.

The device is purely mechanical. Permanently integrated into the bottle, it keeps the information with the wine, from the estate to the tasting.

03 / ORIGINS AND MANUFACTURING

From a sommelier's insight to precision mechanics.

TEGWEN NAVEOS

Founder of Beaucarnea

A trained sommelier and former fine-dining chef, Tegwen Naveos developed Beaucarnea in response to a simple observation: bottles can pass through many places and owners without their transport and storage conditions being visible.

Research began in 2013. After ten years of development and several prototypes, Beaucarnea, founded in December 2022, brought to life a mechanical capsule protected by several patents.

Made in France

Production began in 2025 with our industrial partners in the Haut-Doubs, the cradle of French watchmaking. Development brings together mechanical expertise and precision engineering.

Designed to accompany fine wines over time

With no electronics or electrical power supply, the capsule is designed to accompany the longevity of fine wines. Sealed to its bottle, it is not intended to be reused on another bottle.

Its components are designed with recyclability in mind; the device remains attached to the bottle until the end of its use.

04 / ESTATES AND VINTAGES

Identify the estate. Recognise the vintage.

002 **Domaine Prieuré Roch**

Since the 2023 vintage

004 **Frederic Cossard**

Since the 2024 vintage

A COLOUR FOR EVERY VINTAGE

The number identifies the estate; the colour distinguishes the wine's vintage. Both can be read directly on the dial.

2026 - Cloud Dancer

2025 - Mocha Mousse

2024 - Peach Fuzz

2023 - Viva Magenta

05 / AWARDS

Innovation recognised by the world of wine.

2025 / LA REVUE DU VIN DE FRANCE

Grand Prize for Innovation 2025

La Revue du vin de France honours Beaucarnea for its mechanical capsule and its record of the temperatures experienced by each bottle.
